Summary

3D Printed Remote Controlled CyberTruck

[Hobby & Makers](#) > [RC & Robotics](#)

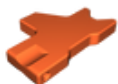

Tags: [rc](#) [diy](#) [car](#) [tesla](#) [rccar](#) [cybertruck](#)

This is an almost entirely 3D-printed RC version of the CyberTruck. Once built, it has four-wheel drive and four-wheel steering which makes it extremely capable both on and off road. A video documenting and showing the car can be found here:

A list of necessary hardware can be found in the video's description above. This project started with the Terno5 project several revisions ago but since then all of the parts have been modified.
